

AIR MONITORING AS EASY AS A-B-C

Honeywell is introducing a new, cost-effective monitor for use in schools that alerts users when conditions are present that may increase the risk of exposure to airborne viral transmission in an indoor area.

The **Honeywell Transmission Risk Air Monitor** is an easy-to-deploy, portable device that measures carbon dioxide and features a proprietary risk alerting system based on different activity levels within a room. This allows end users to proactively improve indoor ventilation, which according to the U.S. Centers for Disease Control and Prevention¹, can help reduce the spread of certain diseases and decrease the risk of exposure among occupants.

Draw on our deep technical experience to guide you through building retrofits, new construction and critical infrastructure upgrades. We're part of your community, helping schools around the world. And we're ready to help you too.
